

Online Food Ordering Simulation

A console-based C programming application that automates restaurant ordering and billing processes

Project Overview

This console-based application simulates online food ordering, allowing users to browse a menu, select items, specify quantities, and receive automatic billing. Developed in C programming language, it demonstrates practical implementation of core programming concepts. The system eliminates manual billing errors, improves efficiency, and provides a structured digital platform for restaurant operations.

Key Features

Menu Display

View food menu with prices for all available items

Item Selection

Select desired food items and enter required quantities

Automatic Billing

Calculate running total and final bill instantly

Multiple Orders

Order multiple items in a single session

Available Menu Items

Burger

Rs. 120

Pizza

Rs. 250

Sandwich

Rs. 80

Biryani

Rs. 180

Cool Drink

Rs. 50

Ice Cream

Rs. 90

System Architecture

Menu Display Module

Shows food items with prices

Order Selection Module

Handles user input and choices

Billing Module

Calculates running total

Confirmation Module

Displays final bill and thank you message

Programming Concepts Demonstrated

Core Concepts

- Variables for data storage
- Loops for repeated ordering
- Conditional statements for logic
- Switch-case for menu selection

Operations

- User input/output functions
- Arithmetic calculations
- Decision making logic
- Program flow control

Algorithm Flow

01

Initialize variables

Set total bill to zero

03

Get user input

Read food choice and quantity

05

Calculate bill

Price $\times$ Quantity

07

Check for more orders

Loop if user wants to continue

02

Display menu

Show food items with prices

04

Validate choice

Check if selection is valid

06

Update total

Add current bill to running total

08

Display final bill

Show complete order summary

Sample Output

```
* ONLINE FOOD ORDERING SIMULATION
```

```
Menu:
```

1. Burger - Rs.120
2. Pizza - Rs.250
3. Sandwich - Rs.80
4. Biryani - Rs.180
5. Cool Drink - Rs.50
6. Ice Cream - Rs.90

```
Enter your choice: 5
```

```
Enter quantity: 2
```

```
Cool Drink added successfully
```

```
Current Bill = Rs. 100.00
```

```
Do you want to order more? (y/n): n
```

```
Final Bill Amount = Rs. 100.00
```

```
Order Placed Successfully
```

```
Thank You for Ordering
```

Benefits & Impact

Time Efficiency

Eliminates manual billing calculations and reduces order processing time significantly

Accuracy

Ensures precise pricing calculations and eliminates human calculation errors

User-Friendly

Simple menu-driven interface that's easy to understand and navigate

Educational Value

Excellent learning tool for beginners to understand programming logic and real-world applications

Future Enhancements

Customer Registration

Login/signup system with profile management

Discount Offers

Coupons, festival discounts, combo offers

Order Tracking

Real-time order status updates

Cart System

Add multiple items before checkout

Payment Gateway

UPI, credit/debit cards, cash on delivery

Mobile App

Android/iOS application version
